

# Light Program Guide

Aqua-Quip's current multi-colour program is 'InstaTouch MC1', which was released in November 2018. This version supersedes Aqua-Quip's previous version 'SP3' program.

Operating manuals for both of these programs, as well as programs developed to be controlled from other third party controllers, appear below.

Hayward Omnilogic UCL	<a href="#">CLICK HERE</a>

- **TO IDENTIFY** the specific program, each Aqua-Quip light is clearly identified with a colour-coded label at the rear of the light - and is supplied with the corresponding instruction manual.
- **DO NOT MIX** lights with different programs, they will not synchronise. Do not connect lights to third party controllers unless they are programmed (and labelled accordingly) to be compatible. If installing Aqua-Quip lights with third party controllers - then specify the controller type when ordering the lights.
- Aqua-Quip's 'InstaTouch MC1' programmed lights are ideally controlled by the InstaTouch Smart Lighting Controller - but otherwise can be controlled from a power point or wall switch. Contact Aqua-Quip should you want to control lights from a home automation system (i.e. c-bus, crestron).
- Aqua-Quip's 'SP3' programmed lights can still be made to order, if needed to replace old lights in an existing pool.
